User Administrator

The User Administrator is the most restricted administrative role in the Community Engagement module. It is the role that should be assigned if our entity requires an administrator to act solely as a gatekeeper for user inclusion into the node.

**CAN CREATE NEW USER ACCOUNTS**
The User Administrator creates and manages new user accounts with the Create User dialog.

**IS ABLE TO SPECIFY THE NODE AND ROLES FOR A USER**
The User Administrator specifies the Institutional Hierarchy node to which a user is to be attached, and grants users an Institutional Role to filter what tabs, modules, brands and themes they will see.

**AS A USER ADMINISTRATOR, YOU:**
- Create new user accounts.
- Manage existing user accounts.
- Inserts users into a node.
